HB 559 – Enabling Municipalities to Ban Single-Use Sources of Plastic Pollution

Testimony

Good morning, Mr. Chairman and members of the committee. My name is Paula Minnehan, Senior VP, State Government Relations with the New Hampshire Hospital Association (NHHA), representing all 26 of the state's community hospitals as well as all specialty hospitals.

The NHHA has concerns with HB 559. As explained in my testimony on HB 102, we have concerns with how this bill would impact hospitals. Hospitals use a significant amount of single-use plastics for patient care. There is no exception in this bill for medical facilities. In other parts of country where these types of bills/ordnances have been passed, exceptions have been considered. We do not believe medical facilities should be subjected to these kinds of regulations. Presently, medical facilities have very few, if any, feasible substitute options for single-use plastics in their patient care areas.

Hospitals in New Hampshire work hard to reduce the volume and toxicity of their waste. The New Hampshire Hospitals for a Healthy Environment (NH3E) was established in September 2001 in response to the ongoing interest expressed by New Hampshire's hospitals around issues such as recycling, waste minimization, environmentally preferable purchasing, mercury reduction, and other concerns related to environmental improvement and sustainability.

The group has met quarterly since 2001 and has closely collaborated with the NH Department of Environmental Services and EPA Region I to advance its efforts.

We do believe this issue deserves further research and study, so our recommendation is to incorporate this bill into HB 617, which creates a study committee to study recycling streams in New Hampshire. That bill passed the House earlier in February.

Thank you for the opportunity to provide our comments. I am happy to answer any questions.
